Course guides
200004 - CD - Differential Calculus

Unit in charge: School of Mathematics and Statistics
Teaching unit: 749 - MAT - Department of Mathematics.
Degree: BACHELOR’S DEGREE IN MATHEMATICS (Syllabus 2009). (Compulsory subject).
Academic year: 2021 ECTS Credits: 7.5 Languages: Catalan, Spanish

LECTURER
Coordinating lecturer: ENRIC VENTURA CAPELL
Others: Segon quadrimestre:
ANGELES CARMONA MEJIAS - M-A, M-B
ANNA DE MIER VINUÉ - M-A, M-B
ENRIC VENTURA CAPELL - M-A, M-B

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking into account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

General:
4. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor’s level, and that provides a basis for originality in developing and applying ideas, often within a research context.
5. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
6. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
7. CG-1. Show knowledge and proficiency in the use of mathematical language.
8. CG-2. Construct rigorous proofs of some classical theorems in a variety of fields of Mathematics.
9. CG-3. Have the ability to define new mathematical objects in terms of others already known and ability to use these objects in different contexts.
10. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of this translation to solve them.
12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best action to extend this knowledge.

Transversal:
11. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

TEACHING METHODOLOGY

LEARNING OBJECTIVES OF THE SUBJECT

(Section not available)
## STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours large group</td>
<td>45,0</td>
<td>24.00</td>
</tr>
<tr>
<td>Hours small group</td>
<td>30,0</td>
<td>16.00</td>
</tr>
<tr>
<td>Self study</td>
<td>105,0</td>
<td>56.00</td>
</tr>
<tr>
<td>Guided activities</td>
<td>7,5</td>
<td>4.00</td>
</tr>
</tbody>
</table>

**Total learning time:** 187.5 h

## CONTENTS

### 1. Topology of $\mathbb{R}^n$. Sequences of vectors.

**Description:**
- Euclidean, normed and metric spaces. Case study: $\mathbb{R}^n$.
- Open and closed sets. Interior, exterior and boundary of a set.
- Connected sets.

**Full-or-part-time:** 25h
  - Theory classes: 6h
  - Practical classes: 4h
  - Self study: 15h

### 2. Limits and continuity of functions.

**Description:**
- Functions of several variables. Level sets and graphics of real functions
- Limit of a function at a point (special emphasis on the case of two variables).
- Continuity at a point and a set. Properties of continuous functions.
- Continuity and compactness. Weierstrass theorem.
- Uniform continuity. Heine-Cantor theorem.
- Equivalence norms and equivalence metrics. Fixed point theorem.

**Full-or-part-time:** 25h
  - Theory classes: 6h
  - Practical classes: 4h
  - Self study: 15h

### 3. Differentiability.

**Description:**
- Differentiability at a point. Hyperplane tangent to the graph of a real function.
- Differentiability and operations. Chain rule. relationship between diferenciability, continuity and partial derivatives.
- Differentiability in an open set. Mean Value Theorem. Functions of class $C^1$.
- Differentiable curves. Tangent vector.

**Full-or-part-time:** 34h
  - Theory classes: 8h
  - Practical classes: 6h
  - Self study: 20h
4. Theorems of differentiable functions.

Description:
- The inverse function theorem. Diffeomorphisms.
- The implicit function theorem. Derivatives of implicit functions.
- Rank theorems.

Full-or-part-time: 41h
Theory classes: 10h
Practical classes: 6h
Self study: 25h

5. Taylor formula. Local extrema.

Description:
- Taylor formula. Expressions of the rest.
- Local extrema. Critical points.
- Classification of critical points: quadratic forms, Hessian matrix.
- Criteria of Silvester and of eigenvalues of the Hessian matrix.

Full-or-part-time: 33h
Theory classes: 8h
Practical classes: 5h
Self study: 20h

6. Submanifolds of R^n and constrained extrema.

Description:
- Submanifolds of R^n. Tangent vectors. Tangent and normal spaces at a point.
- Parameterized and implicit submanifolds. Regular curves and surfaces.
- Constrained extrema and Lagrange multipliers.
- Absolute extrema.

Full-or-part-time: 32h
Theory classes: 7h
Practical classes: 5h
Self study: 20h

GRADING SYSTEM

Final Mark = Max(Final Exam, 0.7*Final Exam + 0.3*Midterm Exam)
Eventually, the grading of the mid-term exam could be modified by other grades.

An extra exam will take place on July for students that failed during the regular semester.
