Course guides
200102 - AR - Real Analysis

Unit in charge: School of Mathematics and Statistics
Teaching unit: 749 - MAT - Department of Mathematics.
Degree: BACHELOR'S DEGREE IN MATHEMATICS (Syllabus 2009). (Compulsory subject).
Academic year: 2020 ECTS Credits: 7.5 Languages: Catalan

LECTURER

Coordinating lecturer: JUAN JOSÉ RUE PERNA
Others: Segon quadrimestre:
SANTIAGO BOZA ROCHO - M-A
JAIME FRANCH BULLICH - M-B
JUAN JOSÉ RUE PERNA - M-A, M-B

PRIOR SKILLS

Knowledge in Differential and Integral Calculus in one and several variables.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking in account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

Generical:
4. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor's level, and that provides a basis for originality in developing and applying ideas, often within a research context.
5. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
6. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
7. CG-1. Show knowledge and proficiency in the use of mathematical language.
8. CG-2. Construct rigorous proofs of some classical theorems in a variety of fields of Mathematics.
9. CG-3. Have the ability to define new mathematical objects in terms of others already know and ability to use these objects in different contexts.
10. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of this translation to solve them.
12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best action to extend this knowledge.

Transversal:
11. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

TEACHING METHODOLOGY
LEARNING OBJECTIVES OF THE SUBJECT

The course has to be for the student a transition between Calculus and Mathematical Analysis. Because of that, an important goal for the student has to be to become used to the utility of abstraction and conceptual methods.

Even though the abstract and conceptual character is the most important, the calculus aspects of some parts (Fourier series, integrals depending of one parameter) have to be fully reached.

The course has to be useful as a preparation for the use of Mathematical Analysis in other courses like Ordinary Differential Equations (where uniform convergence is more used), Partial Differential Equations (where the mean square convergence is more used) and Functional Analysis (where the knowledge on function spaces is further developed). It can also be useful as a preparation for postgraduate courses on subjects like signal analysis or function theory.

**Lebesgue measure and integration in R.**

**Description:**
- Measurable sets and measurable functions.
- Integration of measurable functions.
- Dominationed convergence. Integral calculus and integrals depending on parameters.
- $L^p$ spaces. Series de Fourier en $L^2$

**Full-or-part-time:** 62h 30m
- Theory classes: 15h
- Practical classes: 10h
- Self study: 37h 30m

**GRADING SYSTEM**

Problem assignment/activities (PR, 10%), exam midterm (EP, 30%) and final exam (EF, 60%). The grade of the final exam will be considered if it is larger than the average of the course (see the following formula). The maximum of all possibilities will be considered:

$$\text{MAX} (EF, 0.7\times EF+0.3\times EP, 0.9\times EF+0.1\times PR, 0.6\times EF+0.3\times EP+0.1\times PR)$$

Additionally, there will be an extraordinary exam during July for students who fail the course. In this case the continuous evaluation will be not considered.
